About Me

Senior Product & UX Designer with 15+ years of design experience and 7+ years in Product within Agile environments. I lead product discovery and end-to-end UX across complex platforms, designing both customer-facing journeys and internal operational systems. I translate ambiguous requirements into structured, scalable experiences aligned with business goals and measurable outcomes.

Experience

Senior Product & UX Designer at CET (Center for Educational Technology)

July 2022 – January 2026

Key responsibilities and achievements:

- Led end-to-end UX across dual ecosystems: content creation platform (internal workflows) and classroom-facing player (user-facing experience), aligning product, engineering, and cross-functional stakeholders.
- Owned the full design lifecycle from discovery and research to flows, prototypes, and high-fidelity UI in Figma, shaping complexity into intuitive experiences.
- Conducted user research, journey mapping, and usability testing to reduce cognitive load, improve task efficiency, and validate multi-role workflows.
- Partnered with product, engineering, and data to define success metrics and translate insights into dashboard improvements and product decisions that increased clarity and adoption.
- Built CET's first scalable design system (tokens, components, accessibility standards), ensuring consistency across hundreds of modules.
- Delivered implementation-ready specs and guidelines, collaborating closely with developers and QA to ensure high-quality design-to-code outcomes.

UX Designer at Motorola Solutions

December 2018 – June 2022

Key responsibilities and achievements:

- Designed and co-defined mission-critical enterprise systems (national alert platform, emergency call-center CRM), optimizing dashboards and data-heavy workflows for real-time, high-stress use.
- Validated prototypes with end users and stakeholders to improve clarity, reliability, and decision-making speed.
- Collaborated with engineers on implementation details and front-end prototyping (Angular/HTML/CSS) to ensure design-to-code accuracy.

Early Career & Freelance

2006–2018

Delivered branding, web, and product UX design across health, culture, SaaS, and education. Built websites and interactive platforms, combining creative design with front-end collaboration. Transitioned from a long-term career in graphic and marketing design into UX and product design, later growing into complex enterprise systems at Motorola and CET.

Key Skills

Core Expertise

- Product discovery
- End-to-end product design
- Complex Workflows & Multi-Role Systems
- Design Systems & Scalability
- Data-Informed UX
- Cross-Functional Collaboration

Tools & Technology

- Figma, FigJam, Miro, Adobe XD/CC, Sketch
- Notion, GitHub workflows
- HTML/CSS (handoff & collaboration)
- Google Analytics (data-informed design)

Collaboration & Workflow

- Agile/Scrum teamwork with product, engineering, and stakeholders
- Stakeholder communication and expectation management
- Cross-functional design definition and design reviews
- Mentoring designers and supporting team growth
- Driving alignment across product, tech, and data stakeholders in complex environments
- Contributing to design culture in fast-paced teams

Education

- Professional Diploma – Web Design (advanced: Dreamweaver, ASP, database-driven web design; foundations of UX)
- Professional Diploma – Product & UX Design
- Ongoing development: Figma Design Systems, Accessibility, Udemy & LinkedIn Learning courses

Additional Contributions

- Strong focus on accessibility and inclusive design (WCAG, alt text, keyboard navigation)

Languages

- English – Professional
- Dutch – Basic (A1, beginner)

Location & Work Eligibility

Based in Amstelveen, The Netherlands • No visa sponsorship needed
