

Twenty years of learning **what breaks** **before it does**

Orna Zusman Nevo

Senior Product & UX Designer

+31 68 760 0517 • ozusman@gmail.com • Portfolio: ozuxit.com • linkedin/in/ornazusman

Profile

I've always been drawn to complex systems and problems with no obvious solution. I build context quickly, find where things connect, and help teams turn ambiguity into something they can actually ship. My background is a 20+ year career in web design, branding and marketing, including 7+ years in enterprise product and UX design, and systems thinking. Since 2023 I've been integrating AI-augmented workflows into my practice, using agents and tools to move faster without losing the thinking. I work best in B2B and SaaS environments where things are genuinely complex: multi-role workflows, data-heavy interfaces, or products that need a solid foundation before they can scale.

Experience

Product Design & Build – AidFlow

2025 – Present

Built AidFlow to solve a real operational crisis: coordinating multiple caregivers, shifts, and payments across time zones when spreadsheets and fragmented communication became unmanageable. Took it from problem to a working prototype in **1 day** using Lovable, covering scheduling, shift tracking, payment management, and admin flows. The project shows how structured thinking and clear context become the designer's most important leverage when working with AI.

Senior Product & UX Designer – CET

2022 – 2026

Led key product design across CET's transformation of its national educational ecosystem, including replacing fragmented legacy tools with a unified creation system that **eliminated developer bottlenecks and cut content production effort by 75%**. Covered a dual-platform environment used across thousands of schools.

Owned **end-to-end** product design across a dual-platform ecosystem, translating **complex multi-role** educational workflows into scalable experiences for content creation, teaching, and learning, while establishing design, accessibility, and workflow foundations that enabled consistent experiences across products and teams.

Trained and mentored **four UX designers** on **component-based design workflows**, and led the research behind CET's **transition from Sketch and XD to Figma**, presenting the case to leadership and training designers on the new toolset, shared libraries, and collaborative workflows.

Built CET's **first design system** from scratch, defining tokens, components, **WCAG** accessibility standards and governance foundations that improved consistency and scalability across the ecosystem. Partnered closely with engineering on a **Storybook** component library to keep design and code consistent, accessible, and pixel-accurate.

Product & UX Designer – Motorola Solutions

2018 – 2022

Co-defined and designed **mission-critical** enterprise systems supporting national emergency response, public alerts, and operational decision-making in high-pressure environments where clarity, speed, and reliability directly impact outcomes.

Translated dense operational data and complex workflows into the actionable interfaces of a **national emergency call-center CRM** that reduced cognitive load and helped non-expert operators make decisions under time pressure.

Led the redesign and modernization of a national **hazardous materials monitoring system**, transforming a complex legacy SQL-based environment into a usable, web-based operational platform, working closely with analysts and engineers to redefine workflows and information architecture.

Expanded into front-end implementation within an Angular environment, learning and applying SCSS, **TypeScript**, variables, and component-based development practices while contributing directly to production systems.

Balanced strategic problem framing with hands-on delivery across multiple cross-functional teams, aligning product, engineering, and business stakeholders around complex trade-offs and product decisions.

Design, Branding & Web Design Roles

2006 – 2018

Built a multidisciplinary foundation in graphic design, branding, marketing, web design, and front-end development across health, retail, culture, and education. This still shapes how I approach systems and product design.

Core Strengths

Product and Systems

Systems Thinking, Complex Workflow Design, Product Discovery & Problem Framing, Workflow Architecture, Information Architecture, Design Systems & Scalable Foundation.

Research & Delivery

User Research & Validation, Accessibility & Inclusive Design (WCAG), End-to-End Product Design, Design-to-Code Collaboration, Cross-functional Leadership, Stakeholder Alignment.

AI & Technical Fluency

AI-Augmented Product Design, AI Agents & Workflow Automation, AI Knowledge Base Architecture, Technical Fluency (HTML/SCSS), Component-Based Design, Product Development Collaboration.

Tools

Figma, FigJam, Notion, Obsidian, Miro, Adobe CC, Claude, ChatGPT, Gemini, Cursor, NotebookLM, Lovable, Codex, GitHub, Analytics, Hotjar

Education

Professional Diplomas in Product & UX Design and Web Design. Ongoing development in Design Systems, Accessibility, AI-Augmented Product Development, and UX Research.

Languages & Location

English – Professional, Dutch – Basic (A2), Hebrew – Native.

Amsterdam area, No visa sponsorship needed.
